

meibomask

WHAT IS IT?

A simple, innovative and professional system to solve the most important pathologies of the eye surface - DRY EYE/MGD, CHALAZION, BLEPHARITIS, SJOGREN SYNDROME, POST-BLEPHAROPLASTY - using LIGHT MODULATION® / LLLT technology.

HOW DOES IT WORKS?

Meibomask provides customized treatments based on the MGD severity level detected with Me-Check screening instrument.

- ✓ **According to severity of Meibomian glands loss, Meibomask releases the correct amount of energy and treatment duration for that specific patient.**

WHAT ABOUT THE TECHNOLOGY?

- ✓ **LIGHT MODULATION/LLLT (PATENTED)** solicits cells' mitochondria for a better energy production and triggers biochemical and biophysical reactions that stimulate cells to make a better protein synthesis.
- ✓ Thanks to the light emission of the LED matrix, tear lipid layer is increased and stabilized.

WHAT ARE THE BENEFITS?

- ✓ **Lower and upper eyelids treatment : 100% of pathology**
- ✓ **Direct treatment** of meibomian glands
- ✓ Led matrix triggers eyelid endogenous heat and ATP production
- ✓ This patented technology removes glands blockage, allows lipids to flow to complete tear composition. Improved lipid presence avoids fast evaporation of tears.
- ✓ Visible results for the patient as from the first treatment.
