

EYENETRA

SMARTPHONE-POWERED REFRACTION

For Mobile Clinics | For Existing Practices | For Optical Shops

OUR VISION

We envision a world where all people feel empowered to make informed decisions about their health. We are, in particular, passionate about sight – enabling everyone to experience their world and their journey with perfect visual performance.

HOW DO WE DO THAT?

Using patented, cutting-edge technology developed by our team, we've developed vision-testing tools that enable anyone, anywhere to gain access to the best care possible. And that's just the beginning! The future is here and now.

EUROTECH OPTICAL

Your partner in vision since 1989

JOIN THE REVOLUTION!

Over 4.2 billion people across the globe require eyeglasses of which more than half are still uncorrected due to access and cost barriers. Traditional diagnostic equipment is cumbersome, expensive, and fails to leverage modern-day computing power. EyeNetra envisions a world where all people feel empowered

and able to make informed decisions about their health and wellness. In particular, we are passionate about sight. EyeNetra is extending the reach of vision care by improving access and delivering smarter affordable solutions via cutting-edge mobile technology developed at MIT in Cambridge, Massachusetts.

HOW DO WE ACCELERATE YOUR BUSINESS?

FOR EXISTING PRACTICES

Ideal for optometrists and ophthalmologists wanting to incorporate the latest in mobile technology into their existing practices. Our technology is perfect to conduct vision screenings or establish baseline readings for traditional subjective refraction. Imagine reaching patients in your community that can't get to your brick and mortar practice. Now you can get to them easily and provide a great vision testing experience!

FOR MOBILE CLINICS

What kind of equipment do you need for a mobile vision-testing clinic? Something that's accurate, rugged, dependable, lightweight, and portable. These are the hallmarks of the EyeNetra technology. Small enough to fit in a backpack, rugged enough to survive even the worst baggage handlers, and intelligent enough to provide refractions that are as accurate as equipment costing 10x more!

FOR OPTICAL SHOPS

EyeNetra provides the essentials to validate existing and new eyeglass measurements without cumbersome equipment. Now you can spend more time engaging with your customers as they interact with cutting-edge mobile technology. It's simple: Latest Technology + Increased Customer Facetime = More Glasses Sold!

FOR NGOS AND SOCIAL OUTREACH

Affordable and portable. Easy-to-use with minimal training. We've tested over 35,000 eyes and are still going strong. Our Indian Nayantara program has already serviced more than 12,000 people with only 5 Netra devices. Imagine your social outreach program today, now re-imagine it powered by EyeNetra. Do well by doing good.

JUST STARTING OUT...OR STARTING OVER

Whether you're just starting out in the field (a recent graduate) or just want to start over in a new locale (fill-in favorite vacation spot here), we've got you covered. For a fraction of what it costs to outfit a traditional optometric suite, we can get you up and running in no time! This frees up resources, helps build your clientele, help more people with poor vision, and allows you to live life on your own terms while helping others.

NETRA

A self-test refraction tool powered by a smartphone to collect new eyeglass measurements. NETRA can help prescribe myopia, hyperopia, and astigmatism.

NETROMETER

Captures both single vision and progressive lens measurements of your existing eyeglasses.

NETROPTER

Replaces cumbersome lens kits with an elegant, lightweight solution that integrates a full-range of sph and cyl powers to validate measurements for distance and reading.
